LAB EXPERIMENT

3. Perform basic Image Handling and processing operations on the image is to read an image in python and Convert an Image to show outline using Canny function.

Code:

```
import cv2
import matplotlib.pyplot as plt

# Read the image
img = cv2.imread("scenary.jpg.jpg")

# Check whether the image is loaded
if img is None:
    print("Image not found. Check the file name!")
else:
    # Convert the image to grayscale
    gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

    # Detect edges using Canny
    edges = cv2.Canny(gray, 100, 200)

    # Display original and outline images
    img_rgb = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)

    plt.figure(figsize=(10, 5))

    plt.subplot(1, 2, 1)
    plt.imshow(img_rgb)
    plt.title("Original Image")
    plt.axis("off")

    plt.subplot(1, 2, 2)
    plt.imshow(edges, cmap="gray")
    plt.title("Canny Edge Detection")
    plt.axis("off")

    plt.show()
```
